| 18. Genetics; Eugenics | 43. Surgery; Traumatology |
| 19. Gynecology; Obstetrics | 44. Therapeutics |
| 20. Hematology | 45. Tropical Medicine |
| 21. History; Biography; Bibliography | 46. Tuberculosis |
| 22. Homeopathy; Osteopathy, etc. | 47. Urology |
| 23. Hospitals | 48. Venereal Diseases; Sexology |
| 24. Immunology; Serology | 49. Veterinary Medicine |
| 25. Industrial Hygiene; Sociology | 50. Zoology |

Privately published under the auspices of the

MEDICAL LIBRARY ASSOCIATION, INC.

AND THE
FRIENDS OF THE ARMY MEDICAL LIBRARY
Washington, D. C.

Printed in the U.S.A.

NEW BOOKS

Of the approximately 200 new books received by the Army Medical Library each month a few are being chosen, more or less at random, for brief mention here.

BANKOFF, GEORGE. The practice of local anaesthesia. Rev. ed. London, William Heinemann, Ltd., 1943, 244p.

It is claimed that there is no operation that cannot be performed by an experienced surgeon as well under local anaesthesia as otherwise. The postoperative pain may be experienced sooner but no more intensely than by patients who have undergone general anaesthesia. The technique of local anaesthesia to be employed in various types of operations is described in detail and it is held that the evidence is sufficient to indicate that the local method has definite advantages over the general method of anaesthesia.

BURNET, JAMES. Outlines of industrial medicine, legislation, and hygiene. London, Simkin Marshall etc., etc. 1943, 87p.

This little introductory volume is intended as a stepping stone to more extended study and research in this field and to permit the ordinary practitioner to diagnose those diseases encountered in industry. A brief history of factory legislation in England is given and the essential portions of the various present-day legislative Acts are quoted and discussed.

CURRAN, DESMOND & ERIC GUTTMANN. Psychological medicine, a short introduction to psychiatry. Edinburgh, E. & S. Livingstone, 1943, 188p.

This small volume presents the more practical sides of psychiatry for the benefit of the general practitioner who is called upon to care for patients with illnesses which in many cases have concomitant psychiatric aspects. Every person, however stable, has his "breaking point" and one of the most important duties of a unit medical officer is to prevent the individual reaching that point. Often by the time a man is referred to a psychiatrist it is too late.

HIRSEKORN, H. Denture base readjustment; theory and practice of functional denture stabilization by correcting, relining, or renewing the denture base, with special reference to wartime and post-wartime requirements. Bristol, J. Wright & sons, Ltd. etc., etc. 1943, 122p.

In order to enable the dentist better to understand the great value of denture readjustment the author gives a comprehensive study of the theoretical and practical questions involved. The selection of material and methods to be applied in order to carry out the process properly are described. The methods of relining and relining should be considered standard procedure in modern prosthetic service.

MORTON, R.A. The application of absorption spectra to the study of vitamins, hormones and coenzymes. 2d. ed. London, Adam Hilger, Ltd., 1942, 226p.

Due to the great progress made since the first edition of this book was written it has been necessary to rewrite and enlarge the whole work. In the last twenty years absorption spectra has ceased to be a minor specialty within chemistry and has become a very versatile tool in many fields of research. The book is concerned with solution spectra studies and reviews of the literature dealing with steroids, provitamins and vitamins A, E, K, C, P and B complex, purine and pyrimidine derivatives, proteins, enzymes, and coenzymes.

QUIGLEY, D.T. The national malnutrition. Milwaukee, The Lee foundation for nutritional research, 1943, 113p.

The author discusses such questions as our dietary needs, intake, errors, deficiencies, the treatment of cancer and of anemia, and finally gives a list of good and bad foods. Among the latter he includes oleomargarine, canned goods (except sea foods and acid fruits and vegetables) package foods, sugar, candy, cake, white crackers, white flour bread, biscuits, pancakes, muffins, and piecrust.

SOPER, FRED L. & D. BRUCE WILSON. Anopheles gambiae in Brazil 1930 to 1940. New York, Rockefeller foundation, 1943, 262p.

The history of *gambiae* in Brazil is recounted in connection with the measures leading to its eradication. The mosquito and its larva are described and illustrated in detail as well as its breeding requirements and its role as a vector of malaria. It is considered almost certain that *gambiae* crossed from Nacar to Natal in a French destroyer in the winter of 1929 and spread from there by infiltration to the south. In the campaign against *gambiae* Paris green and pyrethrum spray insecticide were used on both larval and adult forms and the invasion was checked and the mosquito eradicated from its known infested area in less than two years.
